

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Application No.:

09/918,158

Filing Date:

July 30, 2001

Applicant:

Robert A. Dichiara Jr.

Group Art Unit:

1731

Examiner:

Christopher A. Fiorilla

Title:

OXIDE BASED CERAMIC MATRIX COMPOSITES

Attorney Docket:

7784-000146

Director of the United States Patent and Trademark Office P.O. Box 1450 Alexandria, VA 22313-1450

DECLARATION UNDER 37 C.F.R. § 1.131

Sir:

I hereby declare under penalty of perjury as follows:

- 1. That I am the sole inventor of the above-identified application.
- 2. That the invention was conceived and at least partially reduced to practice in this country prior to February 24, 1994, the filing date of the United States Patent No. 5,422,331 to Galligan et al. and prior to December 20, 1996, the filing date of the United States Patent No. 5,958,583 to Rorabaugh et al. In addition, this invention was

BEST AVAILABLE COPY

conceived and at least partially reduced to practice in this country prior to December 15, 1999, the filing date of United States Patent No. 6,497,776 to Butler et al., and prior to March 3, 1998, the filing date of United States Patent No. 6,110,439 to Deshpande et al.

- 3. I am the author of the notebook whose cover page is attached at Exhibit

 A. Pages from this notebook are attached as Exhibits B and C and the information

 contained within this notebook was either prepared by myself or under my direction.
 - 4. That the invention was conceived and/or reduced to practice prior to February 25, 1994, as evidenced by the notebook page attached as Exhibit B. Exhibit B illustrates at least the initial conception and reduction to practice of a composition embodied by at least claim 1. A second page from the notebook is attached as Exhibit C and shows reduction to practice of a further embodiment of the invention claimed in at least claim 1 prior to February 25, 1994.
 - 5. That the invention has never been abandoned, suppressed, or concealed.
 - 6. I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements are being made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false

statements may jeopardize the validity of the application, and patent issuing thereon, or any patent to which this verified statement is directed.

Dated: 8/25/04

obert A. Dichiara, Jr.

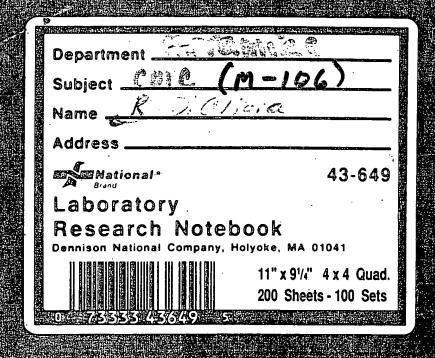

Exhibit A

Charge #: IR-53704

	VARIABLES	
A	Mullite (Baikalox Submicron A)2O3/SiO2: 1.75)	Silica Sol/Mul 1.3
L		

LAMINATE SIZE: 6.5" (Warp direction) x 9.5" (Fill direction) untrimmed # Plies: 8

a) Heat clean a piece of 8HS Nicalon fabric 39" wide (Fill direction) by 13" long (Warp direction). b) Make up mix and use just after mixing or remix before use. Put 500 grams of Silica Sol (Nalco 2327) into the small ball mill and add 375 grams of submicron Baikalox Mullite (Al2O3/SiO2: 1.75) mix for 0.5 hours. Add 1.5 grams of Dow Corning antifoam 1410. Mix for 3.5 hours use mixture after this point. If observe foaming when opening up mill or viscosity not right for prepreging let Bob D. know. If cannot use that day, ball mill mixture again for 2 hours before use.

c) Hand prepreg the fabric try and achieve about 33 % fiber to matrix ratio and lay-up 8 wet plies

nested together, 6.5" (Warp direction) x 9.5".
d) Fabric Wt. 127, 7 g,
Prepreg Wt. (actual) 307, 1 g. Fiber/Matrix ratio = Fabric Wt./Prepreg Wt. (actual) x 100 = 41.6 %.

Press cure the laminate Apply 200 psi immedately and heat press to 200°F hold for 1/2 hour.

Heat press to 220°F at 1°F/min and hold for 1/2 hour. Heat press to 350°F at 1°F/min, and hold for 1/2 hour. Remove laminate for post curing.

f) Post cure: To 1500° F/2 hr at 5 to 10° F/ minute.

g) Do physicals: % Porosity, % Matrix and % Fiber. h) Cut laminate into flexure samples (0.5" x 5.5" [Warp direction]). may want to Reseation the HEO'C

i) Heat treat samples placing samples into furnace at-temperature and remove to room temperature.

		, -
m) Test Samples:	Heat Treated	Testing Temperature
4 Flexure	None	RT
4 Flexure	1500°F/1hr	1500°F
4 Flexure	2000°F/1hr	2000°F
B Flexure	2000° F/1hr	RT

Chamasty or well. See . 4 Submiction is major effect.

There is a Key

or well. Good den

COMMENTS:

Progon. Lold was pured set at 180 west 1 7:50 rm. went to 210 F for 1/2 hr.

Then to 425°F /1°F/min hold thour. on 10-7-93 7:30 Am removed from

245° press. Panel Looked Excellent, uniform surface and .105" this

scens have. Post cuved to 2000 for 2 hrs. Port haudens up

within 5 minutes at 180°F Mixture puttes-up after one

day in a closed container
